The effective and easy way to de-scale humidifier tanks

Scale buildup on humidifier heaters and heat exchangers acts as an insulator, reducing humidifier performance while increasing energy costs.

To keep humidifiers operating as efficiently as possible, use DRI-STEEM[®] Humidifier De-scaling Solution. Just add the De-scaling Solution to off-line humidifier tank water, allow solution to work, then drain and rinse. It doesn't get much easier.

Most municipalities allow flushing the De-scaling Solution into sewers.* The De-scaling Solution **cleans without corroding** humidifier tanks or welds; and there is **no off-gassing, flammability, or added heat** associated with other cleaning solutions.

It's the most effective way to keep humidifiers de-scaled. You could hand-scrape, but that doesn't reach all heat exchanger surfaces. And other cleaners can damage your humidifier and void the warranty.

DRI-STEEM Humidifier De-scaling Solution is clearly the safe, effective, and easy way to de-scale humidifier tanks.

Keep your humidifier operating at peak efficiency with DRI-STEEM Humidifier De-scaling Solution
